Software Activation on Cisco Integrated Services Routers and Cisco Integrated Service Routers Generation 2

First Published: October 20, 2009
Revised: April 12, 2012

This document describes the activation process for Cisco software on Cisco Integrated Services Routers (ISRs) and Cisco Integrated Service Routers Generation 2 (ISR G2). Cisco routers support Cisco IOS software entitlement and enforcement on various platforms. This document supports the following products:

<table>
<thead>
<tr>
<th>Modular ISRs G2</th>
<th>Fixed ISRs</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cisco 3900 Series ISR</td>
<td>Cisco 890 Series ISR</td>
</tr>
<tr>
<td>Cisco 2900 Series ISR</td>
<td>Cisco 880 Series ISR</td>
</tr>
<tr>
<td>Cisco 1900 Series ISR</td>
<td>Cisco 860 Series ISR</td>
</tr>
</tbody>
</table>

Finding Support Information for Platforms and Cisco IOS and Catalyst OS Software Images
Use Cisco Feature Navigator to find information about platform support and Cisco IOS and Catalyst OS software image support. To access Cisco Feature Navigator, go to http://www.cisco.com/go/cfn. An account on Cisco.com is not required.

Contents

This document contains the following topics:
- Before You Begin, page 2
- Cisco IOS Software Releases Supported, page 2
Before You Begin

When you order a new router, it is shipped preinstalled with the software image and the corresponding permanent licenses for the packages and features that you specified. You do not need to activate or register the software before use.

The following prerequisites apply if you are upgrading or installing a new Cisco IOS software license on Cisco ISRs:

- Purchase the software package or feature you want to install. You will receive a product activation key (PAK) with your purchase.
- If you do not have a cisco.com username and password, get your username and password by registering at Cisco.com.
- Familiarize yourself with the Cisco software licensing concepts detailed in the Cisco Software Activation Conceptual Overview chapter in Cisco IOS Software Activation Configuration Guide.

Tip

Use the `show license feature` command to view the software packages and features supported on your router. Table 2, Table 3, and Table 5 list the package and feature licenses available for your router.

Tip

Use the `show license` command in privileged EXEC mode to display information about the Cisco IOS software packages and features license level on your router.

Cisco IOS Software Releases Supported

The following Cisco IOS software releases support software activation on Cisco ISRs:

- Cisco 3900 series, 2900 series, and 1900 series ISRs running Cisco IOS Release 15.0(1)M.
  - Cisco 3925E and Cisco 3945E ISR running Cisco IOS Release 15.1(1)T.
- Right to Use license is supported on Cisco IOS Release 15.0(1)M4, 15.1(1)T2, 15.1(2)T2, 15.1(3)T, 15.1(4)M1, or later.
- Cisco 800 series ISRs running Cisco IOS Release 12.4(15)XZ or later support either the non-cryptographic image or the cryptographic image.
- Cisco 800 series ISRs running Cisco IOS Release images earlier than Cisco IOS Release 12.4(15)XZ do not support software activation.
Information About Software Activation on Cisco ISRs and ISRs G2

The Cisco IOS universal image contains *all* packages and features in one image. You can access the required functionality based on the license installed on your router.

**Software Claim Certificate and License Activation**

Software Claim Certificates are used for licenses that require software activation. The claim certificate provides the Product Activation Key (PAK) for your license and important information regarding the Cisco End User License Agreement (EULA).

In most cases, Cisco or your Cisco partner will have already activated the licenses ordered at the time of purchase and no Software Claim Certificate is provided. You can determine the licenses activated on your system by issuing the `show license feature` command on the router command-line interface (CLI) or with a Cisco management application such as Cisco CP or Cisco License Manager (CLM). Cisco License Manager is a free software application available at [http://www.cisco.com/go/clm](http://www.cisco.com/go/clm).

**Right to Use Notification**

When you order a license from Cisco, you will receive a Right to Use Notification. You may begin using the licensed features upon receipt of the Right to Use Notification. Keep the Right to Use Notification for your records as proof of your license purchase.

**Universal Device Identifier**

The universal device identifier (UDI) has two main components: the product ID (PID) and the serial number (SN). For Cisco 3900 Series platforms that use field-replaceable unit (FRU) motherboards, the motherboard PID and SN are used. All other platforms use the chassis PID and SN.

The PID and SN are printed on a label located on the back of most Cisco hardware devices or on a label tray visible on the front panel of field-replaceable motherboards. See your router’s *Hardware Installation Guide* or *Read Me First* to see the location of the label.

**Tip**

The UDI can be viewed using the `show license udi` command in privileged Exec mode.

**UDI Example**

The following example shows the output from the `show license udi` command on a Cisco 3925 ISR:

```
Router# show license udi
Device#   PID        SN                   UDI
---------- ----------- ---------- --------------------------
*0 C3900-SPE100/K9 FHH13030044 C3900-SPE100/K9:FHH13030044
Router#
```

**Evaluation License**

Your router comes with the evaluation license, also known as a temporary license, for most packages and features supported on your router. If you want to try a new software package or feature, activate the evaluation license for that package or feature.
Right to Use License

Right to Use licenses are available on Cisco IOS Release 15.0(1)M4, 15.1(1)T2, 15.1(2)T2, 15.1(3)T, 15.1(4)M1, or later. These licenses are available on the honor system.

Permanent License

If you want to permanently activate a software package or feature on your router, you must get a new software license.

Figure 1 shows the steps for software activation.

End User License Agreement

By accessing or using the Cisco products received with your Cisco ISR or ISR G2, you agree that your use of such products is governed by the terms and conditions of the Cisco Software License and any applicable supplemental license agreement. A copy of the terms of the End User License Agreement (EULA) is available at http://www.cisco.com/en/US/docs/general/warranty/English/EU1KEN_.html.

A EULA is presented for acceptance when you activate an evaluation license.

Software Packages and Features

The Cisco IOS universal image contains all packages and features in one image. The universal image on the Cisco 1900, 2900, and 3900 series ISRs are a superset of Cisco IOS simplified technology packages.

Each package is a grouping of technology-specific features. Multiple technology package licenses can be installed and activated on the Cisco 1900, 2900, and 3900 series ISR platforms.

Individual features can be enabled or disabled by license keys. Feature licenses may be subscription-based, uncounted, or count-based licenses.
Use the `show license feature` command to view the technology package licenses and feature licenses supported on your router.

The Cisco 1900, 2900, and 3900 series ISRs support the following universal images:

- universalk9—offers all IOS features supported by next generation ISRs.
- universalk9_npe—does not support VPN payload and secure voice functionality and satisfies import considerations for CIS countries.

Table 1 lists the image names for the Cisco 1900 series, 2900 series, and 3900 series routers.

<table>
<thead>
<tr>
<th>Platform</th>

</table>

1. Supported only on the universalk9_npe-mz image.
2. Supported only on the universalk9-mz image.
Feature Licenses

Note

Enabling a feature license may require that a particular technology package license be installed and enabled on the router.

The following section lists the feature licenses available on the fixed and modular Cisco ISR platforms:

- Table 4—Feature Licenses Supported on Fixed Cisco ISR Platforms, page 7
- Table 5—Feature Licenses Supported on Modular Cisco 1900, 2900, and 3900 Platforms, page 7

Table 4 lists the feature licenses available on the fixed Cisco ISR platforms.

### Table 4 Feature Licenses Supported on Fixed Cisco ISR Platforms

<table>
<thead>
<tr>
<th>Feature License</th>
<th>860 Series</th>
<th>880 Series</th>
<th>890 Series</th>
</tr>
</thead>
<tbody>
<tr>
<td>IPS (Subscription)</td>
<td>—</td>
<td>Yes</td>
<td>Yes</td>
</tr>
<tr>
<td>SSL_VPN(^1) (Counted)</td>
<td>—</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

1. The SSL_VPN features are supported only on the universalk9-mz image.

Table 5 lists the feature licenses available on Cisco ISR G2 platforms and the required technology package license.

### Table 5 Feature Licenses Supported on Modular Cisco 1900, 2900, and 3900 Platforms

<table>
<thead>
<tr>
<th>Feature License</th>
<th>Required Technology Package License</th>
<th>1900 Series</th>
<th>2900 Series</th>
<th>3900 Series</th>
</tr>
</thead>
<tbody>

<td>Yes(^4)</td>
<td>Yes</td>
</tr>
<tr>
<td>CME-SRST</td>
<td>uck9 (Unified Communications)</td>
<td>—</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

1. Cisco model 1905 only.
2. The SSL_VPN features are supported only on the universalk9-mz image.
3. The hsec9 features are supported only on the universalk9-mz image.
4. Only 2921 and 2951 routers support the hsec9 feature license.
Evaluation and Right to Use Licenses

Table 6 lists the Evaluation and Right to Use licenses available on the Fixed Cisco ISRs and Cisco ISR G2 platforms.

### Table 6 Evaluation and Right to Use Licenses

<table>
<thead>
<tr>
<th>Technology Package or Feature</th>
<th>Evaluation License</th>
<th>Right to Use License</th>
</tr>
</thead>
<tbody>
<tr>
<td>Technology Package</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Advanced Security</td>

<td>Yes</td>
<td>Yes</td>
</tr>
<tr>
<td>IPS (Subscription)</td>
<td>Yes</td>
<td>Yes</td>
</tr>
<tr>
<td>SSL_VPN³ (Counted)</td>
<td>Yes</td>
<td>Yes</td>
</tr>
<tr>
<td>hseqk9⁴</td>
<td>—</td>
<td>—</td>
</tr>
<tr>
<td>CME-SRST</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

1. Supported only on the universalk9_npe-mz image.
2. Supported only on the universalk9-mz image.
3. The SSL_VPN features are supported only on the universalk9-mz image.
4. The hseqk9 features are supported only on the universalk9-mz image.

Resource Allocation with securityk9 Technology Package License

Table 7 shows how resources such as bandwidth, number of tunnels, and TLS sessions for voice, IPSec, and SSLVPN are allocated with a securityk9 technology package license.

### Table 7 Resource Allocation with securityk9 Technology Package License

<table>
<thead>
<tr>
<th>Client</th>
<th>Tx Bandwidth¹</th>
<th>Rx Bandwidth²</th>
<th>Tunnels³</th>
<th>TLS Sessions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Voice</td>
<td>Necessary bandwidth is reserved or released as needed.</td>
<td>Necessary bandwidth is reserved or released as needed.</td>
<td>Resources are reserved or released as needed.</td>
<td>Resources are reserved or released as needed. Maximum:1000</td>
</tr>
</tbody>
</table>
To view the resource allocated on your router, use the `show platform cerm-information` command. The following output shows an example of the resource allocation for a securityk9 license:

```
Router# show platform cerm-information
Crypto Export Restrictions Manager (CERM) Information:
CERM functionality: ENABLED

Resource allocation:

<table>
<thead>
<tr>
<th>Resource</th>

Options for Getting and Managing Software Licenses

There are multiple options for getting and managing the software licenses on your router. Use one of the following options to get and manage software licenses on your router:

- **Cisco License Manager**—software application that lets you get, register, install, and manage software licenses on multiple devices on your network. See the “Cisco License Manager” section on page 11 for details.

- **Cisco License Call Home**—lets you interact with the Cisco Product License Registration portal directly from your router to get, install, and manage your license. See the “Cisco License Call Home” section on page 11 for details.

- **Cisco Product License Registration Portal**—lets you manually get and register individual software licenses through a registration portal. See the “Cisco Product License Registration Portal” section on page 12 for details.

- **Cisco IOS CLI**—lets you install and manage licenses using the Cisco IOS command-line interface (CLI). See the “Cisco IOS CLI” section on page 12 for details.

- **RTU Migration**—lets you migrate to an Existing or Lifetime RTU release and recommends steps you must perform before upgrading. See the “RTU Migration” section on page 36 for details.

Cisco License Manager

For a network-wide deployment, the Cisco License Manager can automate all license-related work flows by securely communicating with the licensing back-end fulfillment systems at Cisco.com and deploying the obtained licenses to managed devices on a network-wide basis. The application also keeps an inventory of deployed licenses and generates license reports.

Cisco License Manager is available at no cost and can be downloaded by registered Cisco.com users from [http://www.cisco.com/go/clm](http://www.cisco.com/go/clm).

Cisco License Call Home

You can interact directly with the Cisco Product License Registration portal from your device by using the Cisco License Call Home interface. This interface is included with the Cisco Software Activation feature and described in the Cisco Software Activation Conceptual Overview and the Configuring Cisco License Call Home chapters in Cisco IOS Software Activation Configuration Guide.

The License Call Home feature works as a client or server model. Each transaction requires a separate connection to the Cisco licensing infrastructure. The License Call Home feature displays prompts for obtaining required information, converting that information into a defined data structure, and then connecting to the Cisco licensing back-end to interact with the Cisco licensing infrastructure. A request is initiated by a License Call Home EXEC command, and the response is provided by the Cisco licensing infrastructure.

This section contains the following topics:

- Before You Begin, page 11
- Platform Support, page 11
- Installing a License Using License Call Home, page 12

Before You Begin

Your router must have an Internet connection and use HTTPS to connect to the Cisco licensing infrastructure.

Platform Support

Only certain platforms support the Cisco License Call Home function and must run a Cisco IOS crypto K9 image.

For information about platform support, see the Configuring Cisco License Call Home chapter in Cisco IOS Software Activation Configuration Guide.
Installing a License Using License Call Home

Note
Purchase the software feature or package you want to install. You receive a product activation key (PAK) with your purchase.

To install a license using the License Call Home feature, follow these steps:

Step 1
Use the `show license call-home pak` EXEC command to display the SKU list and features available for the PAK provided.

Step 2
Use the `license call-home install pak` command to install a license by using the Cisco License Call Home function.
   a. Complete the license installation by entering `yes` when prompted to install the license and then entering the information requested.

Cisco Product License Registration Portal

Use the Cisco Product License Registration Portal at http://www.cisco.com/go/license to manually perform the following licensing tasks:

- Get a license
- Register for an RMA license
- Look-up a license

This section contains the following topic:
- Getting a Permanent License Using Cisco License Portal, page 12

Getting a Permanent License Using Cisco License Portal

To get a permanent license, perform the steps detailed in this section.

Step 1
Enter the appropriate information at http://www.cisco.com/go/license.

Step 2
Download the license file or receive the license file by e-mail.

Step 3
To obtain additional licenses, repeat Step 1 and Step 2.

Cisco IOS CLI

Use the Cisco IOS CLI to install and manage the software licenses on your router. This section contains the following procedures:

- Installing a Permanent License Using Cisco IOS CLI, page 13
- Activating CME-SRST Feature License, page 16
- Activating an Evaluation License, page 18
Activating a Memory Evaluation License, page 21
Activating an SNA Switching Feature License, page 23
Activating the IPS Feature License, page 24
Activating the SSL_VPN Feature License, page 25
Activating the Gatekeeper Feature License, page 25
Configuring the hseck9 Feature License, page 25
Clearing an Active Permanent Technology Package License, page 26
Configuring the EULA, page 31
Verifying Licenses and Other Licensing Tasks, page 32

### Installing a Permanent License Using Cisco IOS CLI

To install a permanent license, perform the steps detailed in this section.

**Note**
You can install multiple licenses on the Cisco 3900 series, 2900 series, and 1900 series ISRs.

#### SUMMARY STEPS

1. *enable*
2. *license install stored-location-url*
3. *reload*

#### DETAILED STEPS

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>

<td>Router&gt; enable</td>
</tr>
<tr>
<td><strong>Step 2</strong></td>
<td>Installs a license file.</td>
</tr>
<tr>
<td><em>license install stored-location-url</em></td>
<td></td>
</tr>
<tr>
<td>Example:</td>
<td>Router)# license install flash0:uck9-C3900-SPE150_K9-FHH12250057.xml</td>
</tr>
</tbody>
</table>
Software Activation on Cisco Integrated Services Routers and Cisco Integrated Service Routers Generation 2

Options for Getting and Managing Software Licenses

Step 3 reload

Example:
Router# reload

(Optional) Reloads the router.
A reload is not required if an evaluation license is active.
A reload is required to activate a technology package license if an evaluation license is not active.
To activate the SNAsw feature license, perform the steps detailed in the “Activating an SNA Switching Feature License” section on page 23.
See the “Activating the IPS Feature License” section on page 24 for additional information on configuring the IPS feature license.
See the “Activating the SSL_VPN Feature License” section on page 25 for additional information on configuring the SSL_VPN feature license.
See the “Configuring the hseck9 Feature License” section on page 25 for additional information on configuring the hseck9 feature license.
See the “Activating a Memory Evaluation License” section on page 21 for additional information on configuring a memory license.

Screencast

The following screencast shows how to install a license:

Example

The following example shows how to install a license:

Router> enable
Router# license install flash0:uck9-C3900-SPE150_K9-FHH12250057.xml

Activating CME-SRST Feature License

The ISR G2 comes with a 60-day evaluation license. After 60 days, the license changes to “right to use”. The customer is required to pay for the CME-SRST feature license which is valid for 12 years.

**Note**

CME-SRST RTU license is introduced in Cisco IOS release 15.1(3)T and higher.

**Prerequisites**

- UCK9 license
- ISR G2 already accepts UC CLIs
- CME-SRST feature must be configured

**SUMMARY STEPS**

1. show license detail cme-srst
2. configure terminal
3. license accept end user agreement
4. exit
5. show license detail cme-srst
6. write mem

**DETAILED STEPS**

<table>
<thead>
<tr>

Example:

```
c3945-mcqueen(config)#license accept end user agreement
PLEASE READ THE FOLLOWING TERMS CAREFULLY. INSTALLING THE LICENSE OR LICENSE KEY PROVIDED FOR ANY CISCO PRODUCT FEATURE OR USING SUCH PRODUCT FEATURE CONSTITUTES YOUR FULL ACCEPTANCE OF THE FOLLOWING TERMS. YOU MUST NOT PROCEED FURTHER IF YOU ARE NOT WILLING TO BE BOUND BY ALL THE TERMS SET FORTH HEREIN.

Use of this product feature requires an additional license from Cisco, together with an additional payment. You may use this product feature on an evaluation basis, without payment to Cisco, for 60 days. Your use of the product, including during the 60 day evaluation period, is subject to the Cisco end user license agreement [link above].

If you use the product feature beyond the 60 day evaluation period, you must submit the appropriate payment to Cisco for the license. After the 60 day evaluation period, your use of the product feature will be governed solely by the Cisco end user license agreement (link above), together with any supplements relating to such product feature. The above applies even if the evaluation license is not automatically terminated and you do not receive any notice of the expiration of the evaluation period. It is your responsibility to determine when the evaluation period is complete and you are required to make payment to Cisco for your use of the product feature beyond the evaluation period.

Your acceptance of this agreement for the software features on one product shall be deemed your acceptance with respect to all such software on all Cisco products you purchase which includes the same software. (The foregoing notwithstanding, you must purchase a license for each software feature you use past the 60 days evaluation period, so that if you enable a software feature on 1000 devices, you must purchase 1000 licenses for use past the 60 day evaluation period.)

Activation of the software command line interface will be evidence of your acceptance of this agreement.

Activating an Evaluation License

**Note**

Starting with Cisco IOS Releases 15.0(1)M6, 15.1(1)T4, 15.1(2)T4, 15.1(3)T2, and 15.1(4)M, Evaluation licenses are replaced with Evaluation Right To Use licenses. Evaluation Right to Use licenses automatically become Right to Use licenses after the initial evaluation period. Follow the steps detailed in this section to activate an Evaluation Right to Use license.

To activate an evaluation license in the Cisco 3900 series, 2900 series, and 1900 series routers, perform the steps detailed in this section. Evaluation licenses are activated using the `license boot module module-name technology-package package-name` command.

**SUMMARY STEPS**

1. enable
2. configure terminal
3. license boot module module-name technology-package package-name
4. exit
5. reload
### DETAILED STEPS

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Step 1</strong> enable</td>
<td>Enables privileged EXEC mode.</td>
</tr>
<tr>
<td>Example:</td>
<td></td>
</tr>
<tr>
<td>Router&gt; enable</td>
<td></td>
</tr>
<tr>
<td><strong>Step 2</strong> configure terminal</td>
<td>Enters global configuration mode.</td>
</tr>
<tr>
<td>Example:</td>
<td></td>
</tr>
<tr>
<td>Router#configure terminal</td>
<td></td>
</tr>
</tbody>
</table>
| **Step 3** license boot module *module-name*  
technology-package *package-name*   | Enables the evaluation license.  
Use the ? command with the module command to see the module name for your router, and with the technology-package command to see the software packages and features supported on your router. |
| Example:                           |         |
| Router(config)#license boot module c3900 technology-package securityk9 |         |
| **Step 4** exit                    | Exits global configuration mode. |
| Example:                           |         |
| Router(config)#exit                |         |
| **Step 5** reload                  | Reloads the router. A reload is required to activate the software package. |
| Example:                           |         |
| Router#reload                      |         |

### Screencast

The following screencast shows how to activate an evaluation license:

![Screencast](http://www.cisco.com/en/US/docs/routers/access/sw_activation/eval_license_demo/eval_license_2_demo.swf)

### Example

The following example shows how to activate an evaluation license:

```
Router> enable
Router# configure terminal
Router(config)# license boot module c3900 technology-package data
```

PLEASE READ THE FOLLOWING TERMS CAREFULLY. INSTALLING THE LICENSE OR LICENSE KEY PROVIDED FOR ANY CISCO PRODUCT FEATURE OR USING SUCH PRODUCT FEATURE CONSTITUTES YOUR FULL ACCEPTANCE OF THE FOLLOWING TERMS. YOU MUST NOT PROCEED FURTHER IF YOU ARE NOT WILLING TO BE BOUND BY ALL THE TERMS SET FORTH HEREIN.

You hereby acknowledge and agree that the product feature license is terminable and that the product feature enabled by such license may be shut down or terminated by Cisco after expiration of the
applicable term of the license (e.g., 30-day trial period). Cisco reserves the right to terminate or shut down any such product feature electronically or by any other means available. While alerts or such messages may be provided, it is your sole responsibility to monitor your terminable usage of any product feature enabled by the license and to ensure that your systems and networks are prepared for the shut down of the product feature. You acknowledge and agree that Cisco will not have any liability whatsoever for any damages, including, but not limited to, direct, indirect, special, or consequential damages related to any product feature being shutdown or terminated. By clicking the "accept" button or typing "yes" you are indicating you have read and agree to be bound by all the terms provided herein.

Router(config)#
Activating an SNA Switching Feature License

An SNASw feature license must be activated to configure SNASw.

To activate an evaluation or permanent license for the SNA Switching (SNASw) feature, perform the steps detailed in this section. The SNASw feature license is activated using the `license feature snasw` command.

**SUMMARY STEPS**

1. enable
2. configure terminal
3. license feature snasw
4. exit
5. show license feature

### Activating the IPS Feature License

See the [Cisco Services for IPS on IOS](https://www.cisco.com) document on Cisco.com for information on configuring an IPS feature license.
Activating the SSL_VPN Feature License

See the SSL VPN document on Cisco.com for information on configuring the SSLVPN feature license.

Activating the Gatekeeper Feature License

See the Configuring Cisco Unified Border Element with Gatekeeper document on Cisco.com for information on configuring the Gatekeeper feature license.

Configuring the hseck9 Feature License

Activating the hseck9 Feature License
No action is required to activate the hseck9 feature license. The hseck9 feature license is active after installation.

Clearing an Active hseck9 Feature License
To clear an active hseck9 feature license, perform the steps detailed in this section.

SUMMARY STEPS

1. enable
2. configure terminal
3. no license feature hseck9
4. exit
5. reload
6. license clear feature-name
7. show license detail

DETAILED STEPS

### Options for Getting and Managing Software Licenses

#### Clearing a Permanent Software License

To clear an active permanent license from the Cisco 3900 series, 2900 series, and 1900 series routers, perform the following tasks:

1. **Disable the Technology Package**
2. **Clear the License**

### Example

The following example shows how to clear an active license:

```plaintext
Router> enable
Router# configure terminal
<table>
<thead>
<tr>
<th>Enter configuration commands, one per line. End with CNTL/Z.</th>
</tr>
</thead>
</table>
Router(config)# no license feature hseck9
% use 'write' command to disable 'hseck9' license on next boot
Router(config)# exit
Router# reload

Router# license clear hseck9
```

### Clearing an Active Permanent Technology Package License

To clear an active permanent license from the Cisco 3900 series, 2900 series, and 1900 series routers, perform the following tasks:

1. **Disable the Technology Package**
2. **Clear the License**

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Step 4</strong> exit</td>
<td>Exits global configuration mode.</td>
</tr>
<tr>
<td>Example:</td>
<td></td>
</tr>
<tr>
<td>Router(config)#exit</td>
<td></td>
</tr>
<tr>
<td><strong>Step 5</strong> reload</td>
<td>Reloads the image.</td>
</tr>
<tr>
<td>Example:</td>
<td>A reload is required to disable the feature.</td>
</tr>
<tr>
<td>Router#reload</td>
<td></td>
</tr>
<tr>
<td><strong>Step 6</strong> license clear feature-name</td>
<td>Clear the feature license from license storage.</td>
</tr>
<tr>
<td>Example:</td>
<td></td>
</tr>
<tr>
<td>Router#license clear hseck9</td>
<td></td>
</tr>
<tr>
<td><strong>Step 7</strong> show license detail</td>
<td>Verifies that the license has been cleared.</td>
</tr>
<tr>
<td>Example:</td>
<td></td>
</tr>
<tr>
<td>Router#show license detail</td>
<td></td>
</tr>
</tbody>
</table>
Disable the Technology Package
To disable a license, perform the steps detailed in this section.

**SUMMARY STEPS**

1. enable
2. configure terminal
3. `license boot module module-name technology-package package-name disable`
4. exit
5. reload
6. show version

**DETAILED STEPS**

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
</table>
| **Step 1** enable | Enables privileged EXEC mode  
---|---|
| Example:         | Enter your password if prompted. 
---|---|
| `Router>enable`  | 
| **Step 2** configure terminal | Enters global configuration mode. |
| Example:         | 
---|---|
| `Router#configure terminal` | 
| **Step 3** `license boot module module-name technology-package package-name disable` | Disables the active license. |
| Example:         | 
---|---|
| `Router(config)#license boot module c3900 technology-package uck9 disable` | 
| **Step 4** exit | Exits global configuration mode. |
| Example:         | 
---|---|
| `Router(config)#exit` | 
| **Step 5** reload | Reloads the image.  
---|---|
| Example:         | A reload is required to make the software package inactive. 
---|---|
| `Router#reload` | 
| **Step 6** show version | Verifies that the technology package has been disabled. |
| Example:         | 
---|---|
| `Router#show version` | 

Clear the License
To clear the license, perform the steps detailed in this section.

SUMMARY STEPS

1. `license clear feature-name`
2. `configure terminal`
3. `no license boot module technology module-name technology-package package-name disable`
4. `exit`
5. `reload`
6. `show version`

</table>
Example

The following example shows how to clear an active license:

Router> enable
Router# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Router(config)# license boot module c3900 technology-package ?
  datak9   data technology
  securityk9  security technology
  uck9     unified communications technology

Router(config)# license boot module c3900 technology-package uck9 disable
% use ‘write’ command to make license boot config take effect on next boot

Router(config)# exit

Router# reload

Router# show version

Configuring the EULA

Use the license accept end user agreement command in global configuration mode to configure a one-time acceptance of the EULA for all Cisco IOS software packages and features. After the command is issued and the EULA accepted, the EULA is automatically applied to all Cisco IOS software licenses; the EULA is not displayed and the user is not prompted to accept the EULA.

The following example shows how to configure a one-time acceptance of the EULA:

Router(config)#license accept end user agreement

PLEASE READ THE FOLLOWING TERMS CAREFULLY. INSTALLING THE LICENSE OR LICENSE KEY PROVIDED FOR ANY CISCO PRODUCT FEATURE OR USING SUCH PRODUCT FEATURE CONSTITUTES YOUR FULL ACCEPTANCE OF THE FOLLOWING TERMS. YOU MUST NOT PROCEED FURTHER IF YOU ARE NOT WILLING TO BE BOUND BY ALL THE TERMS SET FORTH HEREIN.

Use of this product feature requires an additional license from Cisco, together with an additional payment. You may use this product feature
Software Activation on Cisco Integrated Services Routers and Cisco Integrated Service Routers Generation 2

Options for Getting and Managing Software Licenses

on an evaluation basis, without payment to Cisco, for 60 days. Your use of the product, including during the 60 day evaluation period, is subject to the Cisco end user license agreement

If you use the product feature beyond the 60 day evaluation period, you must submit the appropriate payment to Cisco for the license. After the 60 day evaluation period, your use of the product feature will be governed solely by the Cisco end user license agreement (link above), together with any supplements relating to such product feature. The above applies even if the evaluation license is not automatically terminated and you do not receive any notice of the expiration of the evaluation period. It is your responsibility to determine when the evaluation period is complete and you are required to make payment to Cisco for your use of the product feature beyond the evaluation period.

Your acceptance of this agreement for the software features on one product shall be deemed your acceptance with respect to all such software on all Cisco products you purchase which includes the same software. (The foregoing notwithstanding, you must purchase a license for each software feature you use past the 60 day evaluation period, so that if you enable a software feature on 1000 devices, you must purchase 1000 licenses for use past the 60 day evaluation period.)

Activation of the software command line interface will be evidence of your acceptance of this agreement.

ACCEPT? [yes/no]: yes

RTU Migration

This section describes customer scenarios with regard to migrating to Existing or Lifetime RTU release and recommends actions to take before upgrading.

The initial version of RTU release (Existing RTU) contains built-in evaluation licenses valid for 12 years and Lifetime RTU licenses that are similar to permanent licenses, in that they are built into the IOS image and avoid the overhead of license installation.

Permanent licenses are not affected by any IOS release upgrade.

The first course of action is to consider what release your router is running and then follow the recommended actions if any. This section contains the following topics:

- RTU Releases, page 37
- Global EULA Acceptance, page 38
- RTU Migration Paths, page 39
- Lifetime RTU (After Migration), page 41
RTU Releases

The IOS software releases to consider are categorized as follows:

- Preceding RTU
- Existing RTU
- Lifetime RTU

Preceding RTU

Preceding RTU releases are customers’ running IOS releases with 60 days of evaluation licenses. These include the following releases:

- 15.0(1)M; 15.0(1)M1; 15.0(1)M2; 15.0(1)M3
- 15.1(1)T; 15.1(1)T1
- 15.1(2)T; 15.1(2)T1
- Any 12.4T release

Customers running these releases with evaluation licenses and planning to upgrade to Existing or Lifetime RTU releases are affected. They should follow the recommended actions specified under Preceding RTU to Existing/Lifetime migration paths.

Existing RTU

Initial RTU support was provided in the Existing RTU releases listed below:

- 15.0(1)M4; 15.0(1)M5
- 15.1(1)T2; 15.1(1)T3
- 15.1(2)T2; 15.1(2)T3
- 15.1(3)T; 15.1(3)T1
- 15.1(4)M

Such arrangement basically provided 12-year evaluation licenses and was intended to be a temporary solution until Lifetime RTU support was available. This temporary RTU solution provided immediate relief for customers facing licensing-related overhead.

If you are running Existing RTU releases and planning to upgrade to Lifetime RTU releases, please follow the recommended actions specified under Existing RTU to Lifetime RTU migration paths.

Lifetime RTU

A Lifetime RTU release license includes the following:

1. Initial evaluation period of 60 days
2. Transition to Lifetime RTU license without customer intervention

RTU transition warning/complete Syslogs/Traps are provided 10 days and 5 days before transition and on the actual day of transition.

Customers running the following Lifetime RTU releases are not impacted:

- 15.0(1)M6 or later
- 15.1(1)T4 or later
- 15.1(2)T4 or later
Global EULA Acceptance

Customers migrating to Lifetime RTU are required to accept the global end user license agreement with the Existing RTU release. This is because the Lifetime RTU keys have changed and EULA needs to be accepted again to ensure a smooth transition.

Please perform the following actions when required:

Router(config)# license accept end user agreement

PLEASE READ THE FOLLOWING TERMS CAREFULLY. INSTALLING THE LICENSE OR LICENSE KEY PROVIDED FOR ANY CISCO PRODUCT FEATURE OR USING SUCH PRODUCT FEATURE CONSTITUTES YOUR FULL ACCEPTANCE OF THE FOLLOWING TERMS. YOU MUST NOT PROCEED FURTHER IF YOU ARE NOT WILLING TO BE BOUND BY ALL THE TERMS SET FORTH HEREIN.

Use of this product feature requires an additional license from Cisco, together with an additional payment. You may use this product feature on an evaluation basis, without payment to Cisco, for 60 days. Your use of the product, including during the 60 day evaluation period, is subject to the Cisco end user license agreement http://www.cisco.com/en/US/docs/general/warranty/English/EU1KEN_.html

If you use the product feature beyond the 60 day evaluation period, you must submit the appropriate payment to Cisco for the license. After the 60 day evaluation period, your use of the product feature will be governed solely by the Cisco end user license agreement (link above), together with any supplements relating to such product feature. The above applies even if the evaluation license is not automatically terminated and you do not receive any notice of the expiration of the evaluation period. It is your responsibility to determine when the evaluation period is complete and you are required to make payment to Cisco for your use of the product feature beyond the evaluation period.

Your acceptance of this agreement for the software features on one product shall be deemed your acceptance with respect to all such software on all Cisco products you purchase which includes the same software. (The foregoing notwithstanding, you must purchase a license for each software feature you use past the 60 days evaluation period, so that if you enable a software feature on 1000 devices, you must purchase 1000 licenses for use past the 60 day evaluation period.)

Activation of the software command line interface will be evidence of your acceptance of this agreement.

ACCEPT? [yes/no]: yes

[OK]
RTU Migration Paths

There are basically two IOS release migration paths a typical customer must take to upgrade to Existing or Lifetime RTU release.

1. Preceding RTU Release —> Existing/Lifetime RTU Release
2. Existing RTU Release —> Lifetime RTU Release

Figure 2 shows the steps for migrating to Existing or Lifetime RTU.

Figure 2  Steps for RTU Migration

Preceding RTU —> Existing/Lifetime RTU Migration Path

This procedure covers customers running IOS Preceding RTU releases with evaluation licenses that have not expired and wishing to migrate to Existing or Lifetime RTU releases.

The Existing/Lifetime RTU license keys have changed and require re-acceptance of the end user license agreement. A migration performed without the recommended upgrade procedure results in a loss of functionality related to features that relied on the presence of Preceding RTU license.
Figure 3 shows the migration path from Preceding RTU to Existing/Lifetime RTU releases.

**Figure 3  Preceding RTU to Existing/Lifetime RTU Migration**

Before upgrading, perform the following steps:

---

**Step 1** On the Preceding RTU router, save the startup-config to a location of your choice—it could be a compact flash, tftp server, etc. Note: If any other configuration is required before upgrade, this must be completed and the configuration should be saved before proceeding with this step. The example below is for a tftp server.

```bash
Router# copy startup-config tftp://<tftp_server>/<user_id>/startup-config
```

**Step 2** Edit the startup-config and add the “license accept end user agreement” as shown below in bold right after the “license udi pid ....” entry.

```bash
license udi pid C3900-SPE250/K9 sn FHH1313001U
license accept end user agreement
```

**Step 3** Copy the startup-config back to the Preceding RTU router. The example below is for tftp a server.

```bash
Router# copy tftp://<tftp_server>/<user_id>/startup-config startup-config
```

**Step 4** Do not save the configuration.

**Step 5** Reload the router, without saving the configuration, with the upgrade release, either Existing or Lifetime RTU release. After reload, you can see that the configurations related to licenses are rejected.

**Step 6** Do not save the configuration.

**Step 7** Immediately reload again, without saving the configuration, with the same Existing or Lifetime RTU release. After reload, all the configurations are preserved.

**Step 8** Verify license-related configurationss and feature functionality.

---

**Existing RTU —> Lifetime RTU Migration Path**

This procedure covers customers running IOS Existing RTU releases with Eval/RTU licenses and wishing to upgrade to Lifetime RTU releases.

The Lifetime RTU license keys have changed and require re-acceptance of the end user license agreement. A migration performed without the recommended upgrade procedure results in a loss of functionality related to features that relied on the presence of Existing RTU release license.
Figure 4 shows the migration path from Preceding RTU to Existing/Lifetime RTU releases.

![Figure 4](Existing RTU to Lifetime RTU Migration)

Before upgrading, perform the following steps:

---

**Note**

If the global “license accept end user agreement” has already been performed on the Existing RTU release router, then Steps 1 and 2 can be skipped.

---

**Step 1**

On the Existing RTU release router, configure the global end user license agreement:

```
Router#(config) license accept end user agreement
```

**Step 2**

Save the configuration.

```
Router# write
```

**Step 3**

Upgrade to Lifetime RTU IOS Release.

---

**Lifetime RTU (After Migration)**

Once you migrate to a Lifetime RTU release, as the license keys have changed, the RTU license restarts from time zero. This means that for the first 60 days, the Lifetime RTU license is considered to be in evaluation mode. The show CLI output displays the “EvalRightToUse” for the initial 60 days. An example of this output is shown below.

```
Router# show license
Index 4 Feature: datak9
     Period left: 8 weeks 4 days
     Period Used: 0 minute 0 second
     License Type: EvalRightToUse
     License State: Active, In Use
     License Count: Non-Counted
     License Priority: Low
```
After approximately 60 days, the Lifetime RTU license transitions to “RightToUse” without any further customer intervention. Syslogs and Traps are sent 10 days and 5 days before transition and on the actual day of transition to provide notice of pending/completion of license transition. After the transition, the show CLI output displays “RightToUse” for the License Type. An example of this output is shown below.

```
Router# show license
Index 4 Feature: datak9
  Period left: Life time
  License Type: RightToUse
  License State: Active, In Use
  License Count: Non-Counted
  License Priority: Low
```

### Simple Network Management Protocol

### RMA License Transfer

To transfer a software license from a failed device to a new device, go to the Cisco licensing portal at [http://www.cisco.com/go/license](http://www.cisco.com/go/license).

**Note**

You need the UDI of the defective as well as the RMA router to initiate an RMA replacement license.

**Note**

To transfer a software license from a Cisco 3925 or Cisco 3945 ISR, use the SN and PID from the service performance engine (SPE) and not the chassis.

### Restoring Configuration Files on RMA Replacement Routers

This section describes the steps for RMA replacement routers if restoration of configuration files is required. This applies to RMA replacement routers received with Lifetime RTU release installed.

**Note**

An *RMA router* is the router that is sent back to the manufacturer for RMA, while an *RMA replacement router* is a new router from the manufacturer.

Restoring configuration files on RMA replacement routers is a two-part process.

- **First Part:** Restoring Licenses
- **Second Part:** Restoring Configurations
First Part: Restoring Licenses

Perform the following steps to bring up your RMA replacement router with the required licenses:

**Step 1**  
It is assumed that the startup-config was already saved, for example to a tftp server, compact flash, etc., before the router was sent for RMA. The example shown below is for a tftp server:

```
Router# copy startup-config tftp://<tftp_server>/<user_id>/startup-config
```

**Step 2**  
Edit the saved startup-config with any text editor of your choice. Add the “license accept end user agreement” as shown below right after the “license udi pid...” line.

```
license accept end user agreement
```

**Step 3**  
Copy the startup-config to your RMA replacement router as running config. This step is to bring back your configured licenses from the RMA router. Note that some configurations have been thrown out, although the objective here is to restore the licenses only. The example shown below is for a tftp server:

```
Router# copy tftp://<tftp_server>/<user_id>/startup-config running-config
```

**Step 4**  
Save the configuration.

**Step 5**  
Reload the RMA replacement router.

Second Part: Restoring Configurations

Perform the following steps to restore the configurations on your RMA replacement router:

**Step 1**  
Copy the startup-config to RMA replacement router as running config. This step will restore all the configurations. The example shown below is for a tftp server:

```
Router# copy tftp://<tftp_server>/<user_id>/startup-config running-config
```

**Step 2**  
Save the configuration.

**Step 3**  
Verify license-related configurations and feature functionality.

For additional information on RMA license transfer, see the *Cisco Software Activation Conceptual Overview* chapter in *Cisco IOS Software Activation Configuration Guide*.

Software Activation on Modules

For information on the technology package required to support modules on the Cisco 2900 series and 3900 series ISR, see the *Module Support on Cisco Integrated Services Routers Generation 2* document.

For information on software activation and software applications supported on a module, see the documentation set for the module and the software application.
Additional References

The following sections provide references related to the software activation feature.
